

# MEET THE INSPIRATION FOR OUR NEW S-CLASS LINE OF GAP PAD.

**Bergquist's Super Soft Gap Pad® Delivers Superior Thermal Performance And Ease Of Handling Like Nothing Before It.**

**The new Gap Pad S-Class offers properties never before available in a gap filler material.**

The all-new Gap Pad S-Class has exceptionally low thermal resistance at ultra low mounting pressures, our best thermal performance and softest material yet. Gap Pad S-Class is highly conform-

able and is an ideal solution for applications where fragile components could be damaged by harder gap filling materials. Protect your electronic investment with super soft Gap Pad S-Class.

**Gap Pad S-Class has integrity.**

You don't need to settle for oily, crumbling gap-filling material when you have S-Class; it stays together and provides ease of handling that is unmatched in the industry. S-Class is conformable yet elastic in nature providing excellent interfacing and wet-out, even to surfaces with high roughness or topography. Gap Pad S-Class is

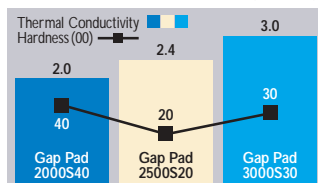

fiberglass reinforced for excellent puncture, shear and tear resistance.

**FREE sample kit and white paper.**

Visit our web site or call to qualify for your FREE Gap Pad sample kit and white papers detailing the new line of Gap Pad S-Class products.

FREE white paper and sample kit

Three Gap Pad S-Class solutions providing exceptional softness, thermal performance and ease of handling.
