

Bergquist Membrane Switches

Always Give No Less Than 100%.

Bergquist HeatSeal switch soaked in gasoline for 10 hours. Electrical integrity 100% intact; no fluid ingress

PSA switch soaked in gasoline for 10 hours. Delamination with substantial fluid ingress.

Actual unretouched photos.

100% Tested, 100% HeatSeal®

Your Superior Sealed Solution.

Bergquist membranes switches are designed to withstand abuse.

Out in the field, where it really counts, traditional membrane switches manufactured with standard pressure sensitive adhesives can fail at any time. Not so with The Bergquist Company's proprietary HeatSeal technology. Our seal is with you 100% of the time. The HeatSeal process thermally bonds the circuit layers and the unique HeatSeal adhesive layers together. The result is a permanent seal from outside environments that protects the electrical integrity of the switch and keeps your product working, even under the harshest conditions.

Superior performance at the right price.

Thanks to innovative new ideas and technological advances in switch manufacturing, Bergquist is

able to provide superior switch reliability in a cost effective manner. For example, our high-efficiency screen printing process all but eliminates scrap while providing faster, more accurate layer alignment. The resulting cost savings are transferred directly to you, our customer.
